PROFESSIONAL SUMMARY

Dynamic Principal API & Integration Architect and Agentic AI Engineer with **11 years of experience** specializing in API development, gateway migrations, and developer efficiency. Currently driving **Engineering Efficiency** by architecting **AI Agentic workflows** (LangGraph), implementing self-correcting **Agentic RAG**, and building ecosystem tools like an enterprise **plugin marketplace for coding agents** (Antigravity, Claude Code, Copilot). Extensive experience in cloud-native API management (Kong Gateway, Apigee, Mulesoft) and robust Infrastructure as Code (Terraform, AWS).

CORE TECHNICAL SKILLS

AI & Agentic Dev	LangGraph, Agentic RAG, Coding Agents (Antigravity, Claude Code, Copilot), LLM Integration, Agentic Workflows, Agent Tool/Plugin Design
API Gateways	Kong API Gateway, Google Apigee, MuleSoft Platform, API Security, OpenAPI/Swagger
Backend & Frontend	Node.js, Express.js, NestJS, React, Next.js, Java, Spring Boot, GraphQL
Infrastructure & DevOps	Terraform, AWS, Docker, Kubernetes, GitHub Actions, GitLab CI/CD
Databases & Messaging	PostgreSQL, MongoDB, MySQL, MS SQL, Redis, RabbitMQ
Testing & Quality	Jest, Supertest, Mocha, Cucumber

PROFESSIONAL EXPERIENCE

Principal Web API Developer (Engineering Efficiency) / MSD International GMBH, Singapore	Oct 2022 – Present
Agentic Ecosystem (Plugin Marketplace): Conceptualized and developed an internal Plugin Marketplace for Coding Agents (Antigravity, Claude Code, Copilot, etc.), enabling teams across the organization to extend agent capabilities and accelerate automated software development workflows. Agentic API Automation: Built stateful, multi-agent systems using LangGraph to orchestrate API lifecycle tasks such as automated spec linting, contract testing, and security policy compliance. Agentic RAG Integration: Implemented retrieval-augmented generation pipelines using vector search routing and self-correction to improve agent context retrieval and documentation search accuracy. Large-Scale API Migration: Played a vital role in successfully migrating 200+ APIs from Apigee to the Kong Gateway platform.	

- **Platform Management API:** Designed and built the Platform Management API, a mission-critical service responsible for orchestrating, migrating, and managing APIs across the enterprise Gateway infrastructure.
- **Developer Tooling & SDLC:** Built internal API developer tools, boilerplate generators, and CI/CD pipelines (GitHub Actions) to streamline the daily developer experience, standardizing project scaffolding and deployments.
- **Infrastructure as Code:** Leveraged Terraform to manage and provision secure, scalable AWS infrastructure across multi-region environments.

Full-Stack Developer / *Credit Agricole CIB, Singapore*

Feb 2022 – Oct 2022

- **Microservices Architecture:** Developed a highly scalable Node.js microservices architecture for Project Mitigant to process complex trade data.
- **GraphQL Integration:** Designed and implemented unified GraphQL APIs that simplified front-end data fetching and reduced network overhead by 30%.
- **CI/CD & DevOps:** Established robust CI/CD deployment pipelines using GitLab CI and Docker, automating testing and deploying to AWS EKS.
- **Team Leadership:** Led a team of five developers, organizing sprints, performing code reviews, and mentoring junior engineers.

Software Developer / Manulife (GrowthOps Asia), Kuala Lumpur, Malaysia Apr 2020 – Feb 2022

- **Legacy Modernization:** Refactored Manulife's core Wealth Registry System (WRS) from a monolithic architecture to NestJS/TypeScript microservices, resulting in a 50% performance improvement.
- **API Gateway & Security:** Implemented security configurations, JWT auth, and routing rules on enterprise APIs.
- **Observability:** Integrated Kibana and New Relic dashboards to monitor system health and resolve real-time performance bottlenecks.

Software Developer / Nbytes Technologies, Mumbai, India Oct 2019 – Apr 2020

- **Mobile Backend:** Developed Express.js backend services and PostgreSQL schemas for the SPOT IT smart parking app.
- **Cross-Platform Dev:** Led Flutter mobile app development for iOS & Android, integrating Google/Apple Maps APIs and push notifications.

Software Developer / SD Global Technologies, Kuala Lumpur, Malaysia Apr 2017 – Oct 2019

- **System Architecture:** Designed and implemented core modules for the Clinicare EMR system (Express.js, RabbitMQ, Angular).
- **Scrum & Delivery:** Managed API design and delivery in a Scrum environment, coordinating cross-team integrations.

Software Developer / SOFOMO Embedded Solutions, Pune, India Jun 2015 – Apr 2017

- Developed full-stack web platforms and Android apps, successfully transitioning from Android to backend Node.js development.

CERTIFICATIONS

Introduction to subagents / Anthropic [Verify Credential](#)

Introduction to Agent Skills / Anthropic [Verify Credential](#)

Microsoft Technology Associate: Web Development Fundamentals / Microsoft (ID: 285MA4-FF5521) 2015

EDUCATION

B.E. in Computer Engineering / Pune University, India 2012 – 2015

Diploma in Computer Engineering / MSBTE, India 2009 – 2012
